

12.5 FLA Hours :

This program has been assessed by the Chiropractor's Association of Australia (National) Ltd, a body recognized by the Chiropractic Board of Australia, and allocated 12.5 Formal Learning Activity Hours.

Developed and Presented by:
The Wellness Practice®
Eat Well • Move Well • Think Well®

Credentialed by the
ICA Council on
Wellness
Lifestyle Science

"I am so excited to launch VERSION 2.0 of this program (previous modules still count toward certification) with a much heavier focus on hands on learning of practical protocols that are ready for immediate implementation into practice. I believe we now have the perfectly balanced combination of research evidence and practical implementation."

~Dr. James Chestnut

Certified Chiropractic Wellness Lifestyle Practitioner Program:

The science AND clinical application of evidence-based chiropractic and lifestyle assessment, reporting, and intervention. (Earn C.C.W.P. Certification)

SYDNEY 2018 - 2019

MODULE 1 - Novotel Sydney Central - October 13-14

Module 1 - Defining and Implementing Evidence-Based Chiropractic Clinical Protocols

Review and critique of the peer-reviewed literature - to be evidence-based you need to know the evidence.

Comparison and contrast of evidence for SMT compared to other spinal healthcare interventions.

Understanding study validity, study quality ratings, and strength of evidence ratings.

Practical implementation of evidence-based clinical exam, report, intervention, and communication protocols.

Modules 2-4 - 2019 - Dates to be determined

Mod 2 - Defining and Implementing Evidence-Based Clinical Nutrition Protocols

Mod 3 - Defining and Implementing Evidence-Based Movement and Physical Fitness Protocols

Mod 4 - Defining and Implementing Evidence-Based Psychosocial Fitness Protocols

If you are ready to build a busy, evidence-based, recovery, performance, wellness and prevention practice that is chiropractic-centric and lifestyle-supported, this is a seminar you MUST attend.

Chiropractic + Lifestyle: The Whole is Greater Than the Sum of the Parts

The VAST majority of health problems in the 21st century have a neuromusculoskeletal and/or lifestyle contributing factor and thus helping sick patients to get well requires clinical knowledge and expertise in both chiropractic and lifestyle. Modern Industrial Society and its associated lifestyle deficiencies and toxicities (stressors) has made wellness lifestyle a required addition to chiropractic care in the 21st century. The indisputable fact is that these lifestyle stressors represent a barrier to both the ability of patients to physiologically respond to chiropractic adjustments and to genetically express their potential for health and quality of life. If one wants to get and keep patients well, one must address these lifestyle causes of illness by empowering patients with information regarding the human genome-matched lifestyle requirements for recovery, wellness, prevention, and performance. Chiropractic and lifestyle form a perfect marriage not just with respect to the paradigm of addressing the cause but with regard to eliciting the best possible patient outcomes - the ultimate measure of clinical success.
